DETAILED ACTION

Claim Objections

1. Claim 1 is objected to because it is vague and indefinite. The recitation of “a rotatable neck interconnected the handle and the body” is unclear. For the purposes of applying art, it has been interpreted that the rotatable neck is interconnected to the handle and the body. The recitation “a rotation radius than that of the handle” is also unclear. For the purposes of applying art, it has been interpreted that the rotation radius is less than that of the handle.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Clavin (US 5,754,412). Regarding claim 1, the reference discloses a standoff connector, comprising a body 11, a base 13 disposed at a lower end of the body, the base having a section less than that of the body, a rotatable handle 20 disposed at a top end of the body, a rotatable neck 12 interconnected to the handle and the body, the neck having a rotation radius than that of the handle and at least one flexible wing 31 disposed on a surface of the body, the wing being spaced from the base by a distance (see figure 3).

Regarding claim 2, a tab 32 is disposed at a lower end of the wing based from the base.

Regarding claim 3, the tab has a thickness no more than the thickness of the wing.

Regarding claim 4, the handle comprises two projections 42 at opposite sides thereof.
